# diffs everywhere!

```
$ git log
```

```
$ git log -p
```

```
$ git log <filename>
```

```
$ git log -p <filename>
```

?

how focused are your commits

# Good git commit hygiene

- focused
- single feature/change
- log message says
  - “what”
  - “why”

**For clean commits,**

```
$ git add -p .
```

# Secret Interactive Git Toolbox

Add to index:

```
$ git add -p .
```

Remove from index:

```
$ git reset -p HEAD
```

Remove from working tree:

```
$ git checkout -p .
```

*Any of these can also be applied to specific files.*

# git's undo button

```
$ git checkout -p .
```

# cool stash trick

```
$ git add -p .
```

```
$ git stash --keep-index
```
